THE POWER OF DATA-DRIVEN DECARBONISATION WITH MARESS

Maress combines available data from the vessels with other relevant data sets to provide insight on how to reduce fuel and emissions.

Our clients tell us that they appreciate how Maress supports efforts in building a company culture and identity focusing on efficient and climate robust operations. Maress is designed to meet the needs of a range of stakeholders such as vessel owners, charterers, contractors and technology providers who offer emissionreducing solutions - and to facilitate controlled collaboration around decarb in the value chain.

Maress is built to handle offshore and high-complexity operations

Real-Time Vessel Performance Insights

Maress is your gateway to a data-driven decarbonisation strategy. Providing real-time, up-to-date performance overviews for each vessel and your entire fleet, Maress is a unique tool for fleet energy management. Build awareness and transparency around your company's decarbonisation efforts with ease.

Fuel & Emission Reduction Insights

Maress intelligently combines onboard data with relevant external datasets to deliver actionable insights on how to reduce fuel consumption and emissions. Easily analyse the impact of energy-saving initiatives and foster a company culture focused on efficient, climate-resilient operations.

Enhancing Marine Energy Efficiency & Emissions

Transparency

We understand that everyone involved in vessel operations – from ship owners and crew to contractors and end clients – has aligned interests in reducing fuel consumption and emissions. Maress facilitates seamless communication, providing the right information to the right people, making energy usage and emissions discussions transparent and clear for all decision-makers.

Effortless Cloud-Based Connectivity

Maress is cloud-based, requiring no hardware installation. It connects seamlessly with leading data collection and ship-to-shore technologies. By reusing data and simplifying the process, Maress helps reduce crew workload, while driving real environmental, monetary, and strategic benefits.

Ready to reduce fuel consumption and enhance efficiency? Maress gives you the tools to transform data into actionable business value.

"

"The need to invest in tools that allow you to improve based on the data you already have is a no-brainer. Maress is one of those tools."

MD, Global Ship Owner

Streamline Your MRV Reporting with Maress

Optimize your MRV reporting process with Maress. Our advanced platform is designed to maximize the value of the data you're already reporting, integrating seamlessly with verifiers to ensure smooth and efficient offshore operations.

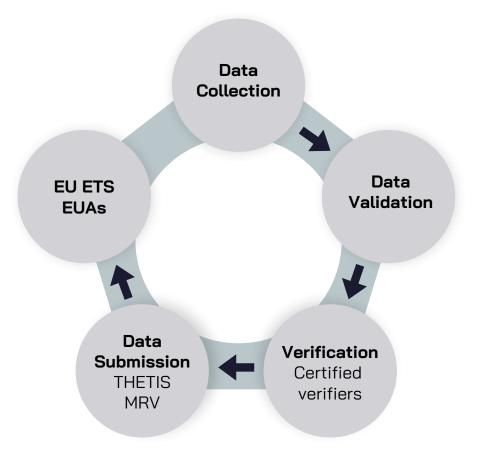

Maress brings extensive expertise in automated reporting, including DCS and NOx, to enhance your reporting experience. Our solution simplifies sharing MRV data with third parties for EU ETS accounting, provides detailed breakdowns of emissions by projects and clients, and supports thorough verification and validation of voyages. Keep all critical documents, such as BDNs and certificates, securely in one centralized location.

Why Choose Maress MRV?

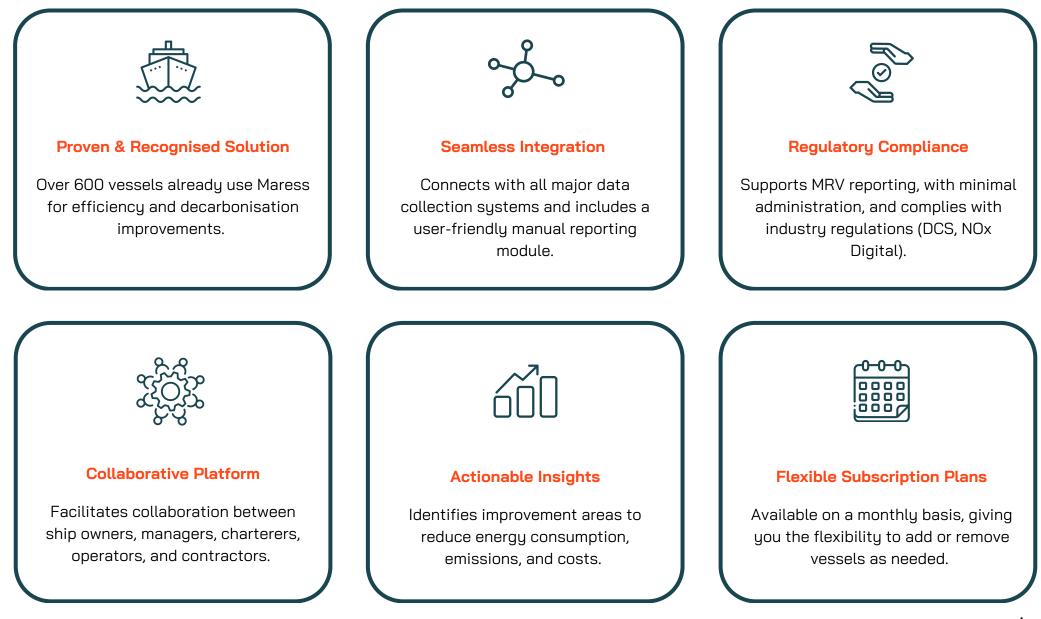

- Reduce the MRV administration
- Use the data already reported
- Seamless integration with verifiers
- Designed for offshore operations
- Leveraging expertise in automated reporting (DCS, NOx)

Key Functionalities

- Share MRV data with 3rd parties, simplifying EU ETS accounting
- Breakdown of MRV emissions by projects and clients for better insights
- Supports verification and validation of voyages
- Keep all verification documents (BDN, Certificates, etc.) in one place
- Status reports for your vessels and fleet at your fingertips

Key Benefits of Maress

VPS maress ()

Explore Maress Modules & Features

With a wide range of powerful modules, Maress can be tailored to fit your specific operational needs:

Fleet Efficiency

Track and optimise the efficiency of your entire fleet.

Vessel Statistics Comprehensive performance data at your fingertips.

Fuel Prediction Data-driven insights to forecast fuel usage.

Environmental Reporting Stay compliant with environmental regulations.

Campaigns & Scoreboard Track and motivate performance improvements across vessels.

SEEMP

Support for the Ship Energy Efficiency Management Plan.

Map Visualise your fleet's location and performance in real-time.

Explore Maress Modules & Features | Add-Ons

Systems Analytics Module Deep dive into system performance data.

Project Module Optimised for complex offshore projects, including offshore wind.

MRV Reporting Module

Simplifies compliance with EU MRV regulations.

Input Module Streamlined data input for quick reporting.

Mode Detection & Data API Customisable tools for advanced users.

VPS maress ())

Why Choose Maress?

Supports Compliance with Minimum Hassle: Close collaboration with class and other independent verifiers ensures compliance with MRV/EU ETS and other regulatory frameworks, reducing administrative burdens.

Collaboration with Stakeholders:

Improve communication and data sharing with all stakeholders — crew, operators, and charterers.

Insight-Driven Decision Making: Drive improvements in energy consumption, emissions, and costs.

Ready to Start?

With Maress, you're just a step away from achieving decarbonisation, efficiency, and strategic growth. Start your monthly subscription today and see the difference Maress can make for your fleet.
